The Structure of Cryptocurrency Returns

Number of Cryptocurrencies Over Time

A D > <
 A P >
 A

Intro ●00000

What drives cryptocurrency prices?

- What determines the return structure of cryptocurrencies?
- What is the source of the underlying value?
- How do investors think about the value?

Conceptual Framework

Two broad frameworks for pricing assets:

- 1. Returns can be explained by characteristics such as size, book-to-market, past returns, industry, etc. (e.g. Fama and French (1993) and Daniel and Titman (1997)).
- 2. Returns can be explained by investor demand. (e.g. Barberis and Shleifer (2003) and Barberis, Shleifer, and Wurgler (2005))
- Demand for holding cryptocurrencies can be perceived as a sign of adoption, which can affects the value of cryptocurrencies due to the network effect. (e.g. Cong, Li, and Wang (2020) and Sockin and Xiong (2020))

This paper studies the structure and drivers of cryptocurrency returns within the framework of examining crypto investors' demand.

Intro 000●00		Exog. Changes in Connectivity	Network Effect 00000000	
0	CD 1			

- Cryptocurrencies with similar size, trading volume, age, consensus mechanism, and token industries show significantly higher comovement.
- The highest comovement is explained by exposure to similar investor bases proxied by cryptocurrencies trading locations.
 - a) Cryptocurrencies with a one-standard-deviation more overlapping exposure exhibit 0.223 standard deviations higher correlations.
 - b) The effect increases in time-horizon and leads to a strong cross-predictability.

Potential Channels:

- 1) <u>Unobservable Characteristics:</u> evidence from new exchange listings and a quasi-natural experiment shows that unobservable characteristics do not seem to explain these patterns.
- 2) Commonalities in Crypto Investors' Demand: a strong exchange-specific component drives cryptocurrencies' order flows, even after controlling for the currency-specific flows.
- 3) The Network Externalities of Adoption: exposure to common demand shocks translates into 36.4% to 50.9% additional comovement for currencies that heavily rely on the network effect.

Shut Down of Chinese Crypto Exchanges

- The Chinese government shut down all Chinese crypto exchanges in September 2017.
- The shutdown created an exogenous shock to certain cryptocurrencies trading locations and, hence, to their connectivity.
- I use the shock to construct an instrument for changes in connectivity.

- In addition to investors, users and developers have a demand for holding cryptocurrencies.
- The value of cryptocurrencies can be attributed to the network effect of adoption by these users and developers.
 - Cong, Li, and Wang (2019); Sockin and Xiong (2018); Li and Mann (2018); Gandal and Halaburda (2016).
- The crypto community also considers adoption and community building as a key source of cryptocurrencies' value.
 - Many perceive buying pressures on crypto exchanges as a sign of user adoption.

Demand pressures can have an amplified effect on cryptocurrencies because they may be interpreted as a sign of "adoption."

Quantifying the Importance of Network Effect

I use 25 million currency-specific comments on Reddit:

- 1. reading and labeling 10,000 comments as a training sample.
- 2. fitting a random forest model to extract important features that distinguishes the comments.
- 3. feeding the rest of 25M comments into the model for labeling.
- 4. quantifying the percentage of comments that are labeled *l* each month for each cryptocurrency.

< ロ > < 同 > < 回 > < 回 > < 回 >

Examples of Comments

- "You should look at community support and number of developers working on projects for a certain platform. There is no other project with network effects even close to ethereum."
- "How many users can Coinbase onboard everyday? The more people that own 1 LTC, the faster the value grows."
- "If you value eth using metcalfs law it's obvious why it's up so much as number of users has gone up so much. People calling it a bubble just don't get it sure price has gone up so much but users and transactions has as well"
- "Bitcoin is growing at its fastest pace in history in terms of network effect/user adoption. Bull run is not over until BTC is past gold/10 trillion."

< □ > < 同 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

The Network Measure for Major Currencies

For example, the percentage of Ethereum comments that include the terms "network effect," "user adoption," "community building," and "user demand" are 6, 7.7, 13.3, and 17.3 times that of Ripple, respectively.

The Structure of Cryptocurrency Returns

Additional Comovement of High-Network Currencies by Quantiles of Connectivity

Network Effect

		Exog. Changes in Connectivity 0000	Network Effect 00000000	Conclusion •
0				

- Conclusion
 - Cryptocurrencies return structure is mainly explained by exposure to similar investor clientele proxied by their trading locations. This effect increases in time-horizon and leads to a strong cross-predictability.
 - Unobservable characteristics do not seem to explain this effect, but it reflects a strong exchange-specific component in crypto investors' demand, which holds even after controlling for the currency-specific flows.
 - These demand shocks seem to be largely amplified through the network effect, potentially because they are perceived as a sign of user adoption.
 - Understanding the demand side of the market is a key to understanding cryptocurrency prices.
