

Discussion on "From fossil fuels to renewables : The
role of electricity storage"
By Linda Nostbakken *et al.*

Gilles Lafforgue (TSE-TBS)

Conference on Energy and Climate Change, Toulouse, 2015

- ① Theoretical static model but time series in the empirical part :
 - Problem of time consistency?

- ① Theoretical static model but time series in the empirical part :
 - Problem of time consistency?
 - Question of R&D spillovers.

- ① Theoretical static model but time series in the empirical part :
 - Problem of time consistency?
 - Question of R&D spillovers.
- ② No storage process : Question of capacity constraint?

- ① Theoretical static model but time series in the empirical part :
 - Problem of time consistency?
 - Question of R&D spillovers.
- ② No storage process : Question of capacity constraint?
- ③ Constant return to scale in primary energy industry.

Comments

- ① Theoretical static model but time series in the empirical part :
 - Problem of time consistency?
 - Question of R&D spillovers.
- ② No storage process : Question of capacity constraint ?
- ③ Constant return to scale in primary energy industry.
- ④ Partial equilibrium approach : Maybe not enough to explain the impact of fossil fuel prices on the innovation sectors.
