#### **Course's Objectives - Objectifs du cours :**

This course is an introduction to strategic optimization, the mathematical aspects of game theory.

It first focuses on zero-sum games, which are essential to the understanding of : worst-case analysis in one person decision making, games of total conflict and general-sum games (where cooperation can be sustained via zero-sum games strategies). Then some aspects of data sciences, such as Approachability, No-Regret Learning and Calibration, are presented.

#### **Prerequisites - Pré requis :**

Analysis (compact metric spaces, continuous functions,...), elementary Probability Theory and interest in mathematics and strategic thinking.

#### **Grading system - Modalités d'évaluation :**

a mid-term exam (40 %) and a final exam (60%)

#### **Mathematical game theory 2:**

You must have followed the 2 courses Advanced analysis and Strategic optimization from the first semester.

**Be careful, some pairs of electives aren't compatible (second semester).**
