

# Master in Economics and Law

Economics and  
Competition Law

## COURSES TAUGHT:

- Topics and Cases in Competition Policy
- Contrats de Distribution
- Fiscalité
- Topics in Law and Economics
- Advanced Industrial Organization
- Econometrics of Competition
- Economics of innovation and Intellectual Property
- Market Regulation in the Digital World
- Economics of internet
- Industry regulation
- Competition law in practice

## SKILLS :

- Knowledge of competition law, its sources as well as the doctrine;
- Analysis of companies' strategies with regard to economic theory;
- Knowledge of regulatory economic models as well as their analysis framework;
- Preparation of reasoned technical reports that call upon economic analysis, interpretation of applied econometric model estimation as well as academic literature, depending on the discipline (Law, Economics);
- Use of economic theory (imperfect competition, games theory, industrial economics) to develop a clear reasoned argument on cases of competition to be discussed or for helping public decision-making;
- Presentation of doctrinal and recent competition cases ruled upon by the authorities in order to bring out the economic or legal issues;
- Research and comparison with foreign legislation in competition law for multinational firms.

The Master in "Economics and Competition Law" is divided into modules over two years: Master 1 in Economics and law and M2 with 288 lecture hours. It gives students a solid grounding in economics, econometrics and law, focusing on competition policy. Students are trained in industrial economics modelling and learn how to analyze and understand market operations and companies' strategies.

They also conduct a rigorous analysis of policy rules on competition law. Teaching is in English (M2) and delivered by well-known researchers, TSE members and professors from the Faculty of Law, as well as practitioners and professional external speakers.

At the end of their two years of studies, students receive two diplomas from Toulouse 1 University Capitole: a Master 1 in Law, as well as a Master in Economic Sciences.  
David ALARY – Master's program Director  
Lucien RAPP et Patrick REY – Co-Directors

## CAREERS/JOBS:

- Consultants, lawyers, economists, experts in competition law, or industrial property...

# Master in Economics and Law

## Economics and Competition Law

### **Thibaud VERGÉ**

Chief Economist at the Competition Authority (France)

My training at the University of Toulouse enabled me to acquire a good knowledge of industrial economics and a better understanding of the impact of companies' strategies on the markets. A good understanding of advances in economic research on the behavior of companies (as well as consumers) is essential for defining company practices that harm consumers and/or social surplus and thus for being able to evaluate the effects of competition policies.

### **Jérémie MARTHAN**

Lawyer at Linklaters (Paris) - Lecturer - ECL Master.

Economic analysis now represents an essential and growing part of competition law. It is therefore imperative for future professionals to master both disciplines: competition law and economics. The Toulouse School of Economics now enjoys international prestige and provides excellent training.

The Master in "Economics and Competition Law" therefore offers unique training that is able to combine economic excellence with competition law and so train the great professionals of the future.

### **Patrick REY**

Professor in Economics (TSE), Lecturer - ECL Master

Given that the application of competition law, sectorial regulations and institutional rules in general are having an effect on economic activity, economic skills are increasingly being combined with mastery of the legal framework. The Master in "Economics and Competition Law" provides exactly the right training necessary for facing up to this challenge.

TSE is particularly well placed to do this because many of its lecturers are recognised experts in this field, at the leading edge of research, as well as in the practice of competition and regulatory policies.

### **Sylvaine PERUZZETTO**

Professor in Private Law (UT1), Lecturer - ECL Master

Competition is essentially a field where the economic approach and the legal approach are complementary. Competition law is in fact based on economic concepts and methods whilst associating elements of the necessary legal certainty.

The Master in "Economics and Competition Law" therefore trains students in these dual skills for positions in professional firms, companies or institutions, enabling them to evaluate the competitive risks of their strategies, their integration operations and their manufacturing, purchasing and sales research policies and to come up with potential answers.
