

COURSES TAUGHT:

- Topics and Cases in Competition Policy
- Economics of Litigation
- Laws and economics of privacy
- Advanced Industrial Organization
- Econometrics of Competition
- Economics of innovation and Intellectual property
- Market Regulation in the Digital World
- Digital Economics
- Industry regulation
- Competition law in practice

Double degree in Economics and Law path :

- Fiscalité (in French)
- Contrat de distribution (in French)

SKILLS:

- Knowledge of competition law, its sources as well as the doctrine.
- Analysis of companies' strategies with regard to economic theory.
- Knowledge of regulatory economic models as well as their analysis framework.
- Preparation of reasoned technical reports that call upon economic analysis, interpretation of applied econometric model estimation as well as academic literature, depending on the discipline (Law, Economics).
- Use of economic theory (imperfect competition, games theory, industrial economics) to develop a clear reasoned argument on cases of competition to be discussed or for helping public decision-making.
- Presentation of doctrinal and recent competition cases ruled upon by the authorities in order to bring out the economic or legal issues.
- Research and comparison with foreign legislation in competition law for multinational firms.

The master in "Economics and Competition Law" is divided into two years: Master 1 and Master 2. It provides students with a solid education in economics, econometrics and law, focusing on competition policy.

Students learn how to model industrial economics and acquire the ability to analyze and understand the functioning of markets and the strategies of firms. They also develop a rigorous analysis of the rules of competition policy and law.

Teaching is in English (M2) and is provided by recognized researchers, members of TSE, professors of the Faculty of Law, as well as by external professional speakers at conferences.

At the end of their two years of study, students obtain one diploma from the University Toulouse 1 Capitole in Economics (Economist path) or two diplomas (Double degree in Economics and Law path): a Master 1 in Law and a Master in Economic Sciences.

Yassine Lefouili – Master's program Director
Lucien RAPP et Patrick REY - Scientific co-directors

Careers:

- **Jobs:** Consultants, lawyers, economists, experts in competition law, or industrial property, ...
- Activity sectors:

Thibaud VERGÉ

Chief Economist at the Competition Authority (France)

My training at the University of Toulouse enabled me to acquire a good knowledge of industrial economics and a better understanding of the impact of companies' strategies on the markets. A good understanding of advances in economic research on the behavior of companies (as well as consumers) is essential for defining company practices that harm consumers and/or social surplus and thus for being able to evaluate the effects of competition policies.

Jérémie MARTHAN

Lawyer at Linklaters (Paris) - Lecturer - ECL Master.

Economic analysis now represents an essential and growing part of competition law. It is therefore imperative for future professionals to master both disciplines: competition law and economics. The Toulouse School of Economics now enjoys international prestige and provides excellent training. The Master in "Economics and Competition Law" therefore offers unique training that is able to combine economic excellence with competition law and so train the great professionals of the future.

Patrick REY

Professeur des Universités en Sciences Économiques (TSE) - Intervenant Master ECL.

Given that the application of competition law, sectorial regulations and institutional rules in general are having an effect on economic activity, economic skills are increasingly being combined with mastery of the legal framework. The Master in "Economics and Competition Law" provides exactly the right training necessary for facing up to this challenge.

TSE is particularly well placed to do this because many of its lecturers are recognized experts in this field, at the leading edge of research, as well as in the practice of competition and regulatory policies.

Sylvaine PERUZZETTO

Professeur des Universités en Droit Privé (UT1) - Intervenante Master ECL.

Competition is essentially a field where the economic approach and the legal approach are complementary. Competition law is in fact based on economic concepts and methods whilst associating elements of the necessary legal certainty.

The Master in "Economics and Competition Law" therefore trains students in these dual skills for positions in professional firms, companies or institutions, enabling them to evaluate the competitive risks of their strategies, their integration operations and their manufacturing, purchasing and sales research policies and to come up with potential answers.
