Course's Objectives - Objectifs du cours :

This course considers the foundations of modern business cycle theory through the derivation of aggregate demand and aggregate supply in a New Keynesian framework. It then studies the determination of aggregate equilibrium and the effects of fiscal and monetary policies. This course is built on the textbook "Macroeconomic Fluctuations and Policies" by Edouard Challe (MIT Press, 2019). The course also uses the tools developed in the M1 Course "Macroeconomics" (first semester) by Tiziana Assenza and Patrick Fève.
