Course's Objectives - Objectifs du cours :

The class aims at providing the students with a coherent framework to interpret macroeconomic data. In particular, it will introduce the concepts of

- * Aggregate supply
- * Aggregate demand
- * General equilibrium
- * Nominal rigidities

It will then discuss the theory and practice of monetary and fiscal policy.

During the class, the students will be confronted to both theory and data, such that the link between theory and observation will be constant.

At the end of the course, students should have understood the concepts of aggregate demand, aggregate supply, general equilibrium, and should know how to use the basic macroeconomic framework to put structure on the data.
